

Palermo school House Before and After Pictures

Bookcase restored and replica hardware added (We would still like to restore the glass to include the original panes)

Floor sanded, a piece of slate added and a replica piece added in blackboard. (would like artist to finish it to be a closer replica) Wood floor sanded and varnished. All wood restored and antique brass hardware added to doors since there was not any hardware existing.

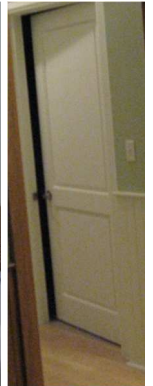

Wood trim stripped and stained, exit signs added. Note the Palermo hall chair donated to us this year

All Lights replaced with appropriate replicas

Old Kitchen removed to build an accesible bathroom and replace with a kitchen using same wood used in the rest of the Schoolhouse. The walls were restored to what would have been the original look with beadboard.

Bathroom expanded to be accessible, new sink and toilet, new solid wood door, floorboards replaced where we found sheets of plywood to match existing wood floor. New solid wood door added to match existing doors in schoolhouse.

Missing wood trim was replicated around several windows to match existing trim on other windows.

New furnace and duct work installed, oil tank removed, fire doors added in basement and ceiling and interior walls dry walled. Outside walls were waterproofed but interior injection of cracks still needed.

Furnace moved to sw corner to open up full basement for additional community use in the future
